BACKBOX

Enable Cyber Resilience for Your Clients' Network Infrastructure

BackBox empowers service providers to offer unparalleled cyber resilience, automating network infrastructure security, compliance, and lifecycle management across networks of any size. Build trust, boost revenue, and lead the market with essential tools and support.

Grow Your Business & Focus on Value-Generating Activities

Multi-vendor Support

Support for 180+ vendors and thousands of devices means less uncertainty about supporting diverse OEM network infrastucture.

Simple to Implement

Automate the onboarding of new clients and discovery of their network infrastructure, reducing time to value.

Single-Pane-of-Glass

One product and one interface, on-prem or in the cloud, to address your client's specific needs across a diverse set of OEM network infrastructure devices.

Easy Management

Multi-tenant, distributed architecture with rich Role Based Access Control (RBAC) allows for central management of clients while offering data and operational segmentation between clients.

Revenue Growth

Provide services at a reduced cost and time, making you more competitive and improving profitability.

Broad Business Solutions

Access to resources to confidently promote, sell, and support your client's specific challenges.

Joint Solution Development

Create new revenue streams through compliance-based service offerings opposite industry compliance frameworks or client golden configurations.

All-in-One Automation

Unlock rapid productivity gains with 3,000+ pre-built automations.

Ongoing Support

Sales and technical enablement, implementation assistance, and joint marketing opportunities.

API-driven to Integrate into Security Workflows

Partner with BackBox to ensure network cyber resilience, help your clients save time and resources, and mitigate with automation.

NETWORK INFRASTRUCTURE INTEGRITY

Vulnerability Mitigation	Vulnerability Remediation	Change Monitoring	Device Access

CONFIGURATION COMPLIANCE & POLICY MANAGEMENT

Source of Truth	CIS & NIST Policy	Hardening Frameworks	Compliance Monitoring

AUTOMATED LIFECYCLE MANAGEMENT

Onboarding & Inventory	Backup & Recovery	Upgrades	Patching

Automated Lifecycle Management

Automate the on-boarding of new clients and discovery of their network infrastructure. Back up all your clients' devices, validate the backup, and restore them with a single click for fast and reliable recovery in case of a service disruption. Over 3,000 pre-built automations offer a single pane of glass to upgrade, patch, and manage all major network vendors with a consistent user interface.

Compliance & Policy Management

Quickly run compliance checks on all devices to assess compliance to industry standard compliance frameworks and identify configuration drift. Automatically remediate non-compliant configurations to align with industry-standard compliance frameworks and internal golden configurations.

Network Infrastructure Integrity

Proactively identify active exploits, help your client understand the recommended prioritization of these exploits and choose to automate vulnerability mitigation via a configuration change or remediate the vulnerability by updating the device software.
